ProSim737

Professional Simulator Suite

BOEING
OFFICIALLY LICENSED PRODUCT

PROSIM:737

Enjoy your simulator experience as never before

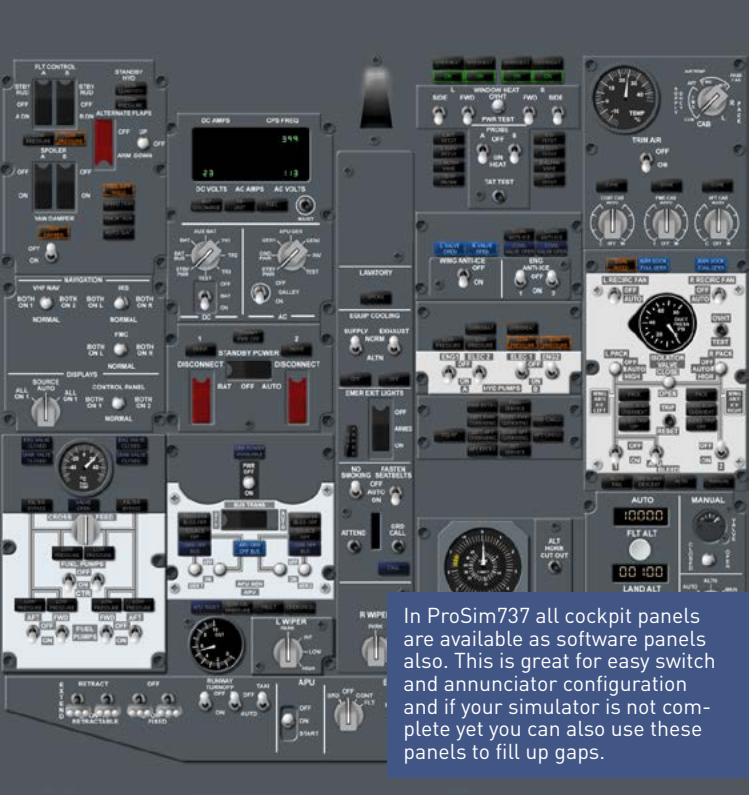
ProSim737 is a Professional Simulator Suite that brings accurate flight simulation into your home. Build a realistic cockpit with ease to fulfil your pilot dream.

Following five years of continuous development the suite was released in January 2012. Since the launch many satisfied builders have converted their cockpits to ProSim737. Both existing and new customers can benefit from our constant updated features.

Simulating all aircraft systems, creating images on your MIP monitors, interfacing with your hardware components and allowing you to operate and control your simulator effectively, ProSim737 will become the center of activity.

We offer a 30 day free trial of our unique product. Send an email to evaluation@prosim-ar.com to receive an Evaluation License and full support.

The ProSim737 Suite contains top quality graphics for all displays with a large number of customisation possibilities. Both for displays and panels.



In ProSim737 all cockpit panels are available as software panels also. This is great for easy switch and annunciator configuration and if your simulator is not complete yet you can also use these panels to fill up gaps.

ProSim737 Suite highlights

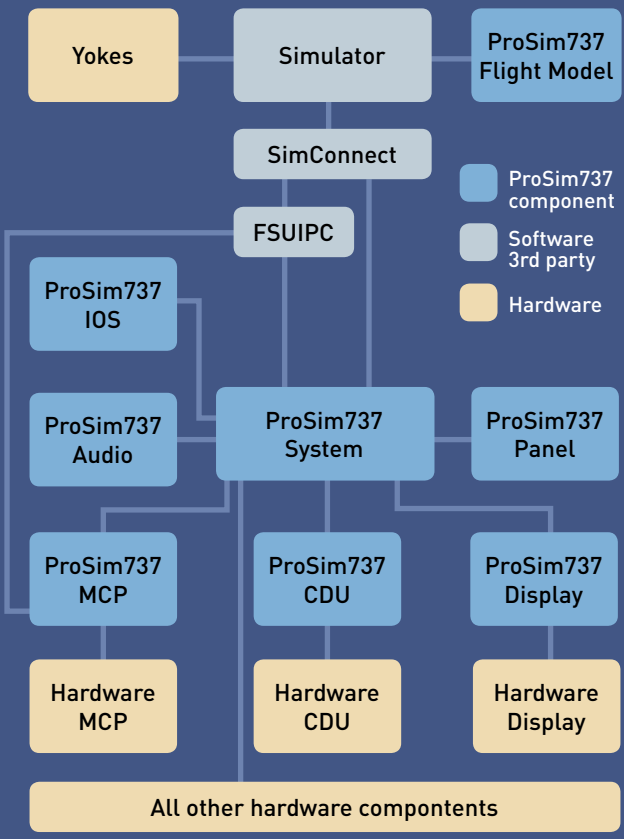
- Complete and detailed aircraft system modeling.
- Sophisticated realistic flight model characteristics.
- Fully implemented PFD, ND, EICAS displays and many standby instruments.
- Fully modeled auto pilot, including CWS and flight director.
- Extensive CDU functionality.
- All configuration is completed through graphical interfaces.
- Special drivers for all major hardware brands, no FSUIPC for hardware interfacing required.
- Compatible with Microsoft® Flight Simulator™ X, Lockheed Martin Prepar3D® and Laminar Research X-Plane (beta).
- Auto configuration for switches and annunciators allowing panel setup within minutes.

Sophisticated IOS functionality

- Advanced web based technology allowing control from any web capable device such as a tablet or laptop.
- Check items functionality helping you to set your cockpit right for the current environment.
- Extensive conditional failures.
- Full freedom plane repositioning.
- Route planning and company route import functionality.
- Extensive weather settings, including real weather import and presets.
- Visibility settings normal to CAT III.
- Fully implemented map including airports and navigation data.
- Ground support: pushback, ground power and refueling.

IOS is an abbreviation for Instructor Operating Station. The IOS is a very handy tool to control your simulator. It allows you to reposition your aircraft, add fuel, change the weather and much more.

ProSim737 architecture



Additional information

- ProSim737 requires a registered version of FSUIPC to interact with the simulator.
- In X-Plane setups the ProSim737 plugin for X-Plane replaces FSUIPC and SimConnect.
- It is recommended to run the simulator, ProSim737 System and ProSim737 MCP on the same computer.
- All other ProSim737 Suite modules connect over TCP networking to ProSim737 System and can be executed from any computer within the network.
- Each hardware display (or Windows™ desktop) is driven by a separate instance of ProSim737 Display.
